

Noshiro, Akita

The Republic of Noshiro

The city of Noshiro is located in northwestern Akita Prefecture in a lush natural setting that includes the Class A Yoneshiro River, the Sea of Japan, the Shirakami-Sanchi Mountains, and Kaze no Matsubara Forest, and is an area characterized by its four distinct seasons. Its main industries are lumber, regenerative agriculture, and energy, especially offshore wind power and other progressive initiatives. With the establishment of Noshiro Port and a highway, this city is expected to become a hub of industry and tourism. In addition to space-themed urban development, Noshiro is pouring effort into regional revitalization to become a town of "harmony, environment, and connections", leveraging basketball, the energy sector, and other things that make the city unique.
